M.A. ECONOMICS
Paper I (Compulsory)

Programme/Class PG/M.A.	Year-Fourth	Semester - VII
Subject-Economics		
Course Code - A080701T	Course Title - MICRO ECONOMIC THEORY	
<p>Course outcomes-</p> <ul style="list-style-type: none"> The students are familiarized with basic concepts of microeconomics such as laws of demand and supply and elasticity etc so that he/she can comprehend them & familiarize with day today happenings. The students learn and understand application of Indifference curve analysis in deriving demand curves, price effect, income effect and substitution effect. The students learn and understand the Theory of production- iso-quants, laws of returns to scale, law of variable proportion. The decision-making process in different market situations such as perfect competition, monopolistic competition, monopoly and oligopoly markets. The students are familiarized with welfare Economics. 		
Credit-5		Compulsory
Max. Marks – 25+75		Min. Passing Marks-33
Unit	Topics	No. of Lectures
I	<p>Demand Analysis: Elasticities (price, cross, income) of demand-Theoretical aspects and empirical estimation. Theories of Demand indifference curves (income, substitutions and price effects, slut sky theorem, compensated demand curve) and their applications. Revealed preference Theory. Revision of Demand Theory by Hicks. Consumer's surplus-Hick's approach, cobweb theorem.</p>	18
II	<p>Theory of Production and cost: Production function short and long period Law of variable proportions and Returns to scale, Isoquants least cost combination of inputs. Elasticity of substitution, Euter's Theorem, Cobb Douglas production function and its properties. Derivation of cost functions from productions functions.</p>	18
III	<p>Price and Output Determination: Price determinations under perfect competition, Monopoly discriminating monopoly, oligopoly (Kinked demand curve, price Leadership, cartels and mergers), monopolistic competition.</p>	18
IV	<p>Welfare Economics: Pareto optimal conditions, value judgment. Social welfare function.</p>	21

M.A. ECONOMICS
Paper VI (Optional)

Programme/Class PG/M.A.	Year-Fourth	Semester - VIII
Subject-Economics		
Course Code - A080806T	Course Title - MATHEMATICAL ECONOMICS	
Course outcomes- <ul style="list-style-type: none"> The students shall be familiar with theory of consumer behaviors, theory of production, price determination in various markets, market equilibrium. 		
Credit-5		Optional
Max. Marks - 25+75		Min. Passing Marks-33
Unit	Topics	No. of Lectures
I	Theory of Consumer Behaviour Cardinal and ordinal utility: Ordinal Utility maximization, Slutsky equation, compensated demand Functions, income, substitution, and price effects: Concept of elasticities generalizations to variable case Separable and additive utility functions, homogeneous and homothetic utility functions; constant elasticity of substitution (CES) and transcendental logarithmic utility functions, Indirect utility functions duality theorem, consumers surplus: Theory of revealed preference and index numbers, Linear expenditure systems; Treatment of demand for durable goods; Empirical demand functions, Consumer behaviour under risk and uncertainty.	18
II	Theory of Production Production function homogeneous and non-homogeneous: Properties of Cobb-Douglas production function, CES; VES and trans log production function, Simple derivation of short and long run cost functions; Modern approach to theory of costs, Cost function; Producer's equilibrium-Laws of return and returns to scale, Constrained optimization of a producer; Generalization to variable case; Input demand functions: Adding up theorem; Technical progress through production function; Analysis of joint profit maximization and multi product firm: Production Possibility curve, Empirical uses of production function analysis.	18
III	Price Determination in Various Markets Price determination in perfect competition, monopoly, monopolistic competition, duopoly, oligopoly and monopoly, Pricing of factors of production, Bilateral monopoly.	18
IV	Market Equilibrium Single market equilibrium Marshallian and Walrasian equilibrium conditions. Lagged market equilibrium. Multi-market equilibrium	21

**M.A. ECONOMICS
Paper VII (Optional)**

Programme/Class PG/M.A.	Year-Fourth	Semester - VIII
Subject-Economics		
Course Code - A080807T	Course Title - COMPUTER APPLICATION IN ECONOMIC ANALYSIS	
Course outcomes- <ul style="list-style-type: none"> This course will develop an interest among students regarding use of computer in Economic. The usage of statistical tools, software and preparation of data files will make the student industry ready. On satisfying the requirements of this course, students will be able to critically evaluate economic problems of developing countries. 		
Credit-5		Optional
Max. Marks - 25+75		Min. Passing Marks-33
Unit	Topics	No. of Lectures
I	Introduction to Computers and Peripherals: Basic components of computer CPU, Input-output devices, keyboard, mouse and scanner, video display, printers and plotters, data storage and retrieval, hard disk, floppy disk and CD ROM; Types of computers and their applications, Computer networking and resource sharing, hardware, software and firmware, examples and techniques in programming languages like C. C, Visual, Basic and Jawa.	18
II	Data Processing, Techniques and Algorithms: Concept of data, record and file. Types of data and data structures, data analysis; File handing and operations like opening, appending and cascading, closing and attribute control; Data storage and retrieval; Data operations; Algorithms like sorting, merging, joining and bifurcation: Database concepts and operation on database; DBMS and RDBMS.	18
III	Statistical Processing Techniques and Methods: Series, group, tables, graphs and objects, Time and frequency series, regression methods and techniques; Regression analysis, Data validation, Trends and cycle city forecasting System modeling and description System equation. Specification: Error and correction strategies, Statistical modeling and descriptive statistics, Distribution functions, Regression statistics.	18
IV	IT Application to Finance: On line banking ATM's Electronic stock exchange. Electronic wading: Data sharing and decimation Electronic transaction: Document delivery; Authentication and validation transaction processing. IT Application to Commerce:	21

**M.A. ECONOMICS
Paper IV (Optional)**

Programme/Class PG/M.A.	Year-Fifth	Semester - X
Subject-Economics		
Course Code - A081004T	Course Title - CO-OPERATION	
Course outcomes- <ul style="list-style-type: none"> The students should be familiar with the co-operative movement in India, history of co-operatives, different types of co-operative societies, co-operative farming, milk supply societies and different problems in co-operation. Co-operative education importance. 		
Credit-4	Optional	
Max. Marks – 25+75	Min. Passing Marks-33	
Unit	Topics	No. of Lectures
I	The co-operative movement in India. History of the co-operative movement, Pre-independence development-early experiment -development of the movement causes of Slow growth. Post independence development Rural credit survey committee.	15
II	Programmes on co-operative development in the Five Year Plans Recent trends in co-operations policy. Different types of co-operative societies agricultural credit societies. Service co-operations. Financing banks-primary and central Land mortgage banks Marketing societies of the primary district and Apex level.	15
III	Co-operative processing societies, co-operative farming societies of different types, consumer's co-operation societies, immigration, dairy, poultry and milk supply societies, different types of industrial societies, housing cooperatives, Urban banks, Labour contract and transport cooperatives.	15
IV	Different problems in cooperation such as (a) single purpose and Multipurpose character of societies (b) Limited and unlimited liability c) Unitary, federal and coral organization. (d) Role of the Reserve Bank of India in the cooperative movement. (e) Co-operative Education Importance of cooperation education publicity and propaganda for the progress of cooperative moment various programmes of cooperative training and education in India.	15

Paper V (Optional)**

Programme/Class PG/M.A.	Year-Fifth	Semester - X
Subject-Economics		
Course Code - A081005T	Course Title - ECONOMICS OF INFRASTRUCTURE	
Course outcomes- <ul style="list-style-type: none"> The students should be familiar with the infrastructure and economic development, Transport Economics, Energy, Economics Educational and Health. It is important for Development. 		
Credit-4		Optional
Max. Marks – 25+75		Min. Passing Marks-33
Unit	Topics	No. of Lectures
I	Introduction: Infrastructure and economic development Infrastructure as a public good: Social and physical infrastructure, Special characteristics of public utilities. The peak load, Off-Load Problem. Dual Principle Controversy, Economies of scale of Joint supply, Marginal Cost Pricing vs. other methods of pricing in public utilities, Cross subsidization free prices, equity and efficiency.	15
II	Transport Economics The structure of Transport Costs and Location of Economic Activities. Demand for Transport. Models of Freight and Passenger Demand, Model Choice, Cost Functions in the Transport Sector Principles of Pricing. Special Problems of individuals Modes of Transport, Inter-modal condition in the Indian Situation.	15
III	Energy Economics: Primacy of Energy in the Process of Economic Development Factors Determining Demand for Energy: Effects of Energy Shortages Energy Conservation. Renewable and Non-conventional Sources Energy, Energy Modeling. The Search for and Optimal Energy Policy in the Indian Context.	15
IV	Education And Health Education and Economic Growth. Approaches to Educational Planning Social Demand. Rate of Return and Manpower Balance Approaches The Case for Universal, Free, Primary Education, Structure of higher education and problems of its financing in India: Human Resources and Human Capital Development. The issues in education policy Health dimensions of development. Determinants of Health - poverty, malnutrition, illiteracy and lack of information.	15

M.A. ECONOMICS
Paper VII (Optional)

Programme/Class PG/M.A.	Year-Fifth	Semester - X
Subject-Economics		
Course Code - A081007T	Course Title - QUANTITATIVE METHODS	
Course outcomes- <ul style="list-style-type: none"> The aim of the course is to equip the student with the fundamental understanding of quantitative methods and their usage in economics. Students would acquire theoretical and practical knowledge of mathematical techniques used in the empirical analysis of economic relationships. 		
Credit-4		Optional
Max. Marks – 25+75		Min. Passing Marks-33
Unit	Topics	No. of Lectures
I	Mathematical Methods 1 Concept of function and types of functions; Limit, continuity and derivative: Rules of differentiation: Interpretation of revenue, cost, demand, supply functions; Elasticities and their types: Multivariable functions, concept and types of production functions: Rules of partial differentiation and interpretation of partial derivatives; Problems of maxima and minima in single and multivariable functions Unconstrained and constrained optimization In simple economic problems, Simple problems In market equilibrium, Concept of integration. Simple rules of integration; Application to consumer's surplus and producer's surplus, Growth rates and simple properties of time path of continuous variables.	15
II	Mathematical Methods - 2 Determinants and their basic properties, Solution of simultaneous equations through Cramer's rule Concept of matrix – their types, sample operations on matrices, matrix version and rank of a matrix Concept of vector its properties, Matrices and vectors Concept of quadratic forms- Eigen roots and Eigen vectors: Introduction to Input-output analysis, Difference equations Solution of hart order and second order difference equation. Applications in Trade cycle models. Growth models and lagged market equilibrium models.	15
III	Mathematical Methods - 3 Linear programming Basic concept, Formulation of a linear programming problem-its structure and variables; Nature of feasible, basic and optimal solution Solution of linear programming through graphical and simplex method: Statement of basic theorems of linear programming. Formulation of the dual of a programme and its interpretation, Shadow prices and their uses, Concept of duality and	15
